

# The Real Number System

## Rational Numbers

- can be written as a fraction
- decimals repeat or terminate

## Irrational Numbers

- can not be written as a fraction
- decimals do not repeat or terminate

## Solving Equations with Squares or Cubes

- undo operations in the reverse order of operations
- undo squares by taking the square root and cubes by taking the cube root.

Solve each equation. Round to the nearest tenth if necessary.

$$1) \frac{4n^2}{4} = \frac{100}{4}$$

$$n^2 = 25$$

$$\sqrt{n^2} = \sqrt{25}$$

$$n = \pm 5$$

$$2) \frac{3d^3}{3} = \frac{363}{3}$$

$$d^3 = 121$$

$$\sqrt[3]{d^3} = \sqrt[3]{121}$$

$$d = 4.9$$

Solve each equation. Round to the nearest tenth if necessary.

$$3) \frac{n^2}{2.5} = 150$$

$$\cancel{2.5} \cdot \frac{n^2}{\cancel{2.5}} = 150 \cdot 2.5$$

$$\sqrt{n^2} = \sqrt{375}$$

$$n = \pm 19.4$$

The formula  $h = 16t^2$  describes the time ( $t$ ) in seconds that it takes for an object to fall from a height ( $h$ ) in feet. A rollercoaster has a 85-foot freefall drop. How long does it take for the rollercoaster to complete the drop? Round to the nearest tenth.

$$h = 16t^2$$

$$\frac{85}{16} = \frac{16t^2}{16}$$

$$5.3 = t^2$$

$$\sqrt{5.3} = \sqrt{t^2}$$

$$2.3 \text{ sec} = t$$
