

Bell Ringer: Graph  $-x - 3y = 6$

Bell Ringer: Graph  $-x - 3y = 6$

$$\frac{-x}{-3} = \frac{+x}{-3} = \frac{+6}{-3}$$

$$y = -\frac{1}{3}x - 2$$

x	y
-6	0
0	-2

## Graphing Linear Inequalities with Two Variables

Solutions are a half-plane of a coordinate plane. The solution may include the line ( $\geq$  and  $\leq$ ) or may not ( $>$  and  $<$ )

### Steps to Graph

- 1) Graph the corresponding equation using slope-intercept form.
  - use a dashed line if  $>$  or  $<$
  - use a solid line if  $\geq$  or  $\leq$
- 2) Pick a test point, normally  $(0, 0)$  and plug into the inequality.
- 3) If the test point is a solution, shade the half-plane that it is in. If the test point is not a solution, shade the other half-plane.

Note: Step 1 divides the coordinate plane into two half-planes.

Sketch a graph of the solution of the linear inequality.

$$1. y > \frac{3}{2}x + 2$$

$$\textcircled{1} y = \frac{3}{2}x + 2$$

dashed line  $>$

$\textcircled{2}$

Test Point  $(0, 0)$

$$0 > \frac{3}{2}(0) + 2$$

$$0 > 2$$

False

Sketch a graph of the solution of the linear inequality.

2.  $x - 2y \geq 8$       ①  $x - 2y = 8$

$-2y = -x + 8$

$y = \frac{1}{2}x + -4$

②  
Test Point  
(0,0)

$0 - 2(0) \geq 8$

$0 \geq 8$

False
